Simon, Herbert A. see Iwasaki, Yumi. 95b:93007

Tornambè, Antonio see Grasselli, Osvaldo Maria; et al. 95m:93004

Tsao, Tung-Ching see Safonov, Michael G. (95k:93001)

Willems, Jan C. Control as interconnection. (English summary) (see 95k:93001)

Yang, Zhanbo Categorical methods in general systems theory and linked time systems series. 95a:93003

Items with secondary classifications in 93A10

Lomadze, V. G. Linear dynamical systems: compactness theorem. (English summary) 95b:93023

Voskoboinikov, V. V. ★ Метод функциональной системы. (Russian. English and Russian summaries) [The functional system method] 95h:00012

93A13 Hierarchical systems

Huang, Su Nan (with Shao, Hui He) Optimization of hierarchical control based on algebraic approach. (English summary)

Shao, Hui He see Huang, Su Nan

Items with secondary classifications in 93A13

Chumakov, V. V. see Kononenko, A. F.; et al. 95c:90002

Khalezov, A. D. see Kononenko, A. F.; et al. 95c:90002

Kononenko, A. F. (with Khalezov, A. D.; Chumakov, V. V.) ★ Принятие решений в условиях неопределенности. (Russian. Russian summary) [Decision making under uncertainty conditions] 95c:90002

Sethi, Suresh P. (with Zhang, Qing; Zhou, Xun Yu) Hierarchical controls in stochastic manufacturing systems with machines in tandem. (English summary) 95b:93189

Zhang, Qing see Sethi, Suresh P.; et al. 95b:93189

Zhou, Xun Yu see Sethi, Suresh P.; et al. 95b:93189

93A14 Decentralized systems

Ahmed, Mohammed Shahgir Decentralized state estimation in large-scale systems. (English summary)

Bernussou, Jacques see Geromel, J. C.; et al. 95g:93003

Campo, Peter J. (with Morari, Manfred) Achievable closed-loop properties of systems under decentralized control: conditions involving the steady-state gain. (English summary) 95i:93010

Cao, Xi-Ren see Ma, Dye Jun

Geromel, J. C. (with Bernussou, Jacques; Peres, P. L. D.) Decentralized control through parameter space optimization. (English summary) 95g:93003

Gong, Zhiming Decentralized robust control of uncertain interconnected systems with prescribed degree of exponential convergence. (English summary)

Hovd, Morten (with Skogestad, Sigurd) Sequential design of decentralized controllers. (English summary)

Kodama, Shinzo see Takai, Shigemasa; et al. 95b:93008

Ma, Dye Jun (with Cao, Xi-Ren) A direct approach to decentralized control of service rates in a closed Jackson network. (English summary)

Mao, Cheng Jyi Decentralized robust control of multi-machine power systems with a prescribed degree of stability. (English and Chinese summaries)

— (with Yang, Jyun-Hau) Decentralized output tracking for linear uncertain interconnected systems. (English summary)

Morari, Manfred see Campo, Peter J. 95i:93010

Peres, P. L. D. see Geromel, J. C.; et al. 95g:93003

Sezer, M. Erol see Yu, Run Yi

Skogestad, Sigurd see Hovd, Morten

Takai, Shigemasa (with Kodama, Shinzo; Ushio, Toshimitsu) Decentralized state feedback control of discrete event systems. (English summary) 95b:93008

Unbehauen, H. (with Vakizadeh, I.) Synchronization of "n" decentralized non-identical plants with integral behavior and two complex poles. (English summary)

Ushio, Toshimitsu see Takai, Shigemasa; et al. 95b:93008

Vakizadeh, I. see Unbehauen, H.

Wang, Le Yi (with Zhan, Wei) On optimal decentralized control. (English summary) (see 95k:93001)

Wen, Changyun Decentralized adaptive regulation. (English summary)

Xie, Chong Yuan see Zhang, Qing Ling

Yang, Jyun-Hau see Mao, Cheng Jyi

Yu, Run Yi (with Sezer, M. Erol) On decentralized adaptive control of interconnected systems with a priori knowledge of isolated subsystems. (English and Chinese summaries)

Zhan, Wei see Wang, Le Yi. (95k:93001)

Zhang, Qing Ling (with Xie, Chong Yuan) A method using the theory of singular systems for decentralized robust control of a class of proper systems. (Chinese. English and Chinese summaries)

Items with secondary classifications in 93A14

- Belmehdi, A. Transfer matrix approach to the structural block diagonal decoupling problem. (English summary)
- Cheng, Cheng Fa (with Wang, Wén Chün; Lin, Yu Ping) Decentralized H^∞ controller design for large-scale systems. (English summary) 95f:93029

1991 Mathematics Subject Classification

1991 Mathematics Subject Classification (MSC)

This is a corrected reprint of the 1991 MSC, which has been in use at MR starting with the January 1991 issue. The 1991 MSC was first printed in the Annual Index for 1990. Corrections and additions since then include the following: 11M36, 14J32, 17B69 and 53Z05 are new. Subsection 11Z50 has been relabeled 11Z05 and 73P05 has been relabeled 73P20. There are several entries in section 17 in which there have been small changes or additions in the description.

Instructions for using the 1991 Mathematics Subject Classification

These instructions apply uniformly to all fields listed. The main purpose of the classification is to help readers to find the items of present or potential interest to them as readily as possible—in MR, in Zbl, or anywhere else where this classification system is used. The review of a paper or book should be printed in the section where it will receive the broadest attention from all readers possibly interested in it—these include both people working in that area and people who are familiar with that area and apply its results and methods elsewhere (inside or outside of mathematics). It will be extremely useful for both readers and classifiers to familiarize themselves with the entire classification system and thus to become aware of all the classifications of possible interest to them.

Every paper or book reviewed in MR receives precisely one "primary" classification number, which is simply the number of the section in which the review of the item will be printed. This section should be the one that covers the principal contribution.

When a paper contains several principal contributions in different areas, the primary classification should cover the "most important" among them. A paper or book may receive one or several "secondary" classification numbers (or "cross-references") to cover any remaining principal contributions, ancillary results, motivation or origin of the problems discussed, intended or potential field of application, or other significant aspects worthy of notice.

The "primary" principal contribution is meant to be the one including the most important part of the work actually done in the paper. For example, a paper whose main overall content is the solution of a problem in graph theory, which arose in computer science and whose solution is (perhaps) at present only of interest to computer scientists, belongs primarily in 05C with a cross-reference in 68; conversely, a paper whose overall content lies mainly in computer science should receive a primary classification in 68, even if it makes heavy use of graph theory and proves several new graph-theoretic results along the way.

For an item with its primary classification in an "applied" section (68 through 94), it is recommended that a cross-reference be given to any "pure" mathematics section (00 through 65) to which the item being classified makes a contribution.

There are two types of cross-references given after many classifications in the list. The first type is of the form "[For A, see X]"; if this appears in section Y, it means that for contributions described by A one should usually assign the classification X, not Y. The other type of cross-reference merely points out related classifications; it is of the form "[See also ...]", "[See mainly ...]", etc., and the classifications listed in the brackets may, but need not, be added to the classification of a paper, or they may be used in place of the classification where the cross-reference is given. The classifier will have to judge which classification is the most appropriate for the paper at hand.

Fermat's Last Theorem — The Theorem and Its Proof: An Exploration of Issues and Ideas

Moderator: Will Hearst

Featured speakers: Robert Osserman,
Lenore Blum, Karl Rubin, Kenneth Ribet,
and John H. Conway

"... successfully brings to life one of the most dramatic episodes in the history of mathematics. A superb cast of speakers and a lively soundtrack featuring such hits as Tom Lehrer's 'There's a delta for every epsilon' and 'That's mathematics' ... make this an ideal entertainment and educational value for the undergraduate classroom, mathematical parties, and indeed for the whole family ... All in all [the video] definitely rates an enthusiastic 'thumbs up,' and is sure to delight mathematicians and nonscientists alike."

Fermat's Last Theorem

Barry Mazur

Enjoy this lucid and insightful exposition!

When Andrew Wiles announced that he had proved Fermat's Last Theorem in June 1993, mathematicians and nonexperts alike applauded his achievement. In this lecture—delivered two months after the historic announcement—Mazur outlines the main ideas in Wiles's groundbreaking work.

1995, ISBN 0-8218-0446-4, NTSC format on 1/2" VHS videotape, approximately 60 minutes, Individual member \$34.95, List \$54.95. To order, please specify VIDEO/97MR

Modular Elliptic Curves and Fermat's Last Theorem

Kenneth A. Ribet

"The author is an engaging speaker with a knack for explaining the central points with clarity...the video provides a good introduction for a mathematician interested in an overview of the proof. We give this video a thumbs up."

Instant access to the *Mathematical Reviews* database — at your fingertips

Starting in January 1996, librarians, researchers, faculty, and students can use the World Wide Web to access one of the most extensive mathematical databases in the world.

MathSciNet®

—available by subscription on the Internet from the American Mathematical Society—delivers instant access to more than 50 years of *Mathematical Reviews* (MR) and *Current Mathematical Publications* (CMP) data.

MathSciNet combines unparalleled search power with the point-and-click ease of the World Wide Web, making inquiries to the MR database easier, faster, and more productive than ever before.

A single search from the office, library, classroom, or home at any time of day will yield a wealth of information unmatched by any other source, including:

- works by a given author
- full journal information
- tables of contents
- reviews referenced in an on-screen review
- reviews that cite the on-screen review
- institution codes and addresses
- serial names and abbreviations
- mathematics subject classification
- daily updates of CMP data
- and more ...
